

# **CIS 603 – Multi-agent Systems**

## **Mid-term Exam Corrections**

With reference to the mid-term exam:

1. Please review each of the problems marked wrong (compare them to the solutions) and make sure I graded them correctly. If you think I have made an error that was not in your favor, come talk to me. I graded a bit quickly at times, or may not have completely understood your argument. But please double-check yourself before you come talk to me. If I made errors in your favor, please note your mistake, but no need to alert me. But feel free to come talk to me about it if you don't quite understand something or are not sure. I won't take any additional points off.
2. For each problem that you missed points on, you can earn all of the points back by redoing the problems (even the true/false questions). To do this, do the following:
  - State your error and the misconception you had that led to your error
  - Say what you should have done/thought instead. In so doing, state the correct principle describing why the answer is what it is.
  - Redo the problem

The primary purpose of a mid-term exam is to learn. So please take the opportunity to learn from it using both of the above mechanisms.
